Introduction in .Net Core -> Lab 5 (Florin Olariu && Dan Nastasa)

Prerequisites:
a) Basic knowledge Entity Framework Core
b) Awareness Web API
c) Awareness 3 tiers application design

Note: The exercise can be used to learn:
- Entity Framework Core
- How Repository Pattern
  works Basic DI/IoC
- How the layers/tiers are interaction each other(a discussion should take place in regards with tiers/layers)
- What decoupling means

Exercise:

1. Using the knowledge accumulated during the course and the project structure from the Kata create a design for an Web API which allows us to make Point of Interest Management and exposes the following operations :
   a. CreatePointOfInterest
   b. EditPointOfInterest
   c. DeletePointOfInterest
   d. GetPointOfInterestById
   e. GetAllPointsOfInterest

Note:
1. Use the basic DDD when designing classes.
2. Make use of correct encapsulation
